

My name is Evangelia Bazouki and I teach
Chemistry at 4th Lyceum, Serres,
the school with the most students in the area.

I represent the teachers of all disciplines
in my school.

Our students are passionate
about the school's theater group
but

STEM disciplines don't excite them.

We can combine STEM and Art at our school.

We want our students to benefit from
a holistic approach
and learn to read between the lines of a script
and identify opportunities for STEM applications.

The proposal is to create a group (or more)
that will be acting
in parallel with the theater group
and in association with it.

Students will follow educational plans
based on the content of a script
or the technical requirements of the play.

The cost will depend on the play of choice
each school year
and the STEM opportunities
that will occur from it.

It is estimated in about $500 \pm 10\%$ € and
the Schools' Financial Committee could cover it.

STEAM activities will last every year
from November to April,
during the preparation of the play
by the theater group.

October will be dedicated to planning the
activities, according to the script.

An assessment of the effort will take place
during May.
