

Pitch

My name is Luigia Palumbo. I am a teacher and expert in the field of digital skills, Mathematic and Science, recognized by the Italian Ministry of Education. I am the oldest Math and Science teacher in my school.

The absence of a vertical school curriculum and horizontal activities regarding STE(A)M is a big problem. We can change it with our STE(A)M education policy at our school.

The teachers will collaborate in the planning of activities and the new methodologies will give to students a holistic view of knowledge.

We will make a training plan for teachers, who will create a vertical curriculum and horizontal activities that will be shown to the local citizens.

Digital and scientific equipment will be financed through PON funds. The work of the teachers of the school will be encouraged with the funds of our school.

Teacher training will take place at the beginning of the school year, while activities for students during the year. The experiences will be shown at the end of the school year and during the open days of the next year.

The schools of the neighboring municipalities compete with our school in the search for new enrolled students. Being a school that before the others has put in place a renewal plan can receive the attention of parents and students.
