

STE(A)M curriculum
in vocational education

I am
BĂLĂȘOIUDOINȚA

Who I am?

teacher at the “Ștefan Odobleja”
Technological High School from Craiova

I present this collaborative proposal as the
head of the county commission for approving
the programs for education Craiova

Why is it
important for you
listening to me?

STEAM education in initial vocational training is low shared.

That is a problem and we can change it by implementing STEAM education in vocational training with the help of the Curriculum in Local Development (CLD).

Who will benefit from my policy?

- **STUDENTS** in vocational and technical education (high school and vocational school), because they acquire desirable software skills according to forecasts related to the future of the labor market
- partner **ECONOMIC OPERATORS** in initial vocational training, local or regional because they can recruit a well-trained workforce for the economic fields in which they operate

What will the impact be?

The impact is to extend the integration of STEAM education to general education disciplines, especially from the perspective of training skills in students through appropriate teaching strategies.

How much
will it cost?

The cost structure include expenses with

- Labor (internal staff)
- Travel & Accomodations
- Rental of premises
- Furnishing
- Hardware, software
- Miscellaneous services

upto a limit of 10,000 euros.

How much
time will it
take?

The results of the project will appear in two years.

What's the plan to overcome show-stoppers?

Risk management aims to achieve results through strategies that mitigate the effects of possible obstacles that, moreover, have neither probabilities nor dangerous severities.

We have provided alternatives for overcoming obstacles, if they arise.

**THANK YOU
FOR ATTENTION!**
